

HESTRA

RANGE BOOK
2017

Hands have been coming first since 1936

GENERATIONS OF A FAMILY-OWNED BUSINESS

Hands come first at Hestra. For 80 years, we have been developing gloves that provide warmth, protection and fingertip sensitivity in the most varied conditions. Today, our range comprises more than 400 styles. It may sound a lot, but people and hands are different. That's why different gloves are needed. Everything that we do today has grown out of the timber forests of the uplands in the Swedish province of Småland. That is where Martin Magnusson and his family settled and where he began making gloves in 1936. Magnusson set up his workshop in a farmhouse and started making gloves for the local lumberjacks. In 1937, a ski slope was created nearby and as its popularity grew, Magnusson saw a new market for his high quality, durable gloves. His sons, Lars-Olof and Göte, became keen skiers and started working in the family business in their teens.

Over the years, the word about our gloves spread to places beyond the village that gave us our name. Sweden was becoming a nation of enthusiastic skiers and the sport's popularity grew in the 1960s. With their avid interest in skiing, Lars-Olof, Göte and their brother-in-law Lennart made sure that Hestra jumped on the bandwagon.

Since then, two more generations of the Magnusson family have entered the company; Svante and Claes, who grew up among skis and gloves, and now their sons, Niklas, Jacob, Anton and Jonas too. Today, Hestra has a presence in over 25 countries and, although we now have three factories and manufacture gloves for sports, fashion and professional uses, nothing has really changed.

The focus remains on hands and gloves. And Hestra is still our home.

1

1

OUTSIDE THE FACTORY

Göte and Martin outside the factory one morning in the 1950s before setting off to visit customers. The cars in the photo are Citroën Berlingo.

2

GLOVES FOR WORKING IN THE FORESTS

The first gloves were produced for local lumberjacks. The gloves were made of leather and wool and reinforced with rivets to withstand the wear and tear of forestry work. Leather and wool are still our favourite materials.

3

THREE GENERATIONS

Today, three generations are actively involved in the company: Lars-Olof from the second generation, his sons Claes and Svante from the third and their sons Jacob, Anton, Jonas and Niklas from the fourth generation.

5

1

1,800,000 PAIRS

Each year, we make 1.8 million pairs of gloves, which are sold to more than 25 countries around the world.

2

BESPOKE SERVICE

Anton and Niklas provide a Bespoke Service in our Stockholm store in the autumn making bespoke dress gloves according to the client's hands and esthetic wishes. The process takes two to three months and requires at least two fittings to ensure the perfect fit.

3

FROM THE DRAWING BOARD

Our Chief Designer, Marianne Knutsson-Hall, working on an enhanced version of the Heli Ski glove.

4

ISABERG - SMÅLAND'S SKI RESORT

In the 1930s, the village of Hestra was called "Småland's Åre" after the Swedish ski resort. The first ski slope at Isaberg opened in 1937. Hestra Ski & Sports Club was founded in 1938, making it one of the oldest ski clubs in Sweden.

5

RESISTANCE TO ABRASION

A Martindale machine is used to carry out tests for abrasion in materials.

The art of reading leather with your fingers

IT STARTS WITH THE RAW MATERIAL

In our world, 0.1 millimetre makes a big difference. When we choose the thickness of the leather, that measurement is the margin that determines whether the glove on your hand will feel soft and supple or stiffer and more robust.

As qualified glove makers, Anton and Niklas can feel with their hands which type of glove a leather hide is suitable for. They are the only active glove makers in Scandinavia to hold a journeyman certificate in their trade and they tailor dress gloves to meet the demands and wishes of their clients. Their experience is also invaluable when we are selecting materials for our gloves.

The thickness of the hide is not only important for the feel of the finished glove, it is also crucial to how well the glove holds up to wear and tear.

Our gloves are produced from different types of hides and skins of varying thicknesses. The intended purpose and wearer of the glove determine which skin is used. Freeriders and ski patrollers, who use their gloves in challenging conditions every day, require more durable, initially stiffer, gloves than those worn by recreational skiers.

Leather is a natural material which means that each hide is unique. It has tiny irregularities, pigment marks and sometimes scars too. The amount of stretch varies in the different sections of the hide. It is the work of the glove maker to see the potential of the leather and use its qualities to the best advantage. Leather does not have the controllable accuracy of synthetic materials – and that's where its beauty and the challenge of working with leather come in. Leather moulds gently and beautifully to the contours of the person wearing it. Almost like a second skin.

1

GOAT LEATHER FOR GUIDES
Army Leather is used to make our Heli Ski glove which is very popular with mountain guides and freeriders. Niklas checks the measurements of a delivery.

2

THICKNESS GAUGE
The sense of touch is important for assessing the thickness of the leather but a thickness gauge is useful too.

3

IMPERFECTIONS UNDER THE MICROSCOPE
Anton and Svante are inspecting a delivery of leather for imperfections in the grain; scars, pigment marks and other defects that determine how the leather will be cut.

2

3

LEATHER GUIDE

Leather is a natural, living material. It is a by-product of the meat industry and one of our oldest materials for clothing. It is beautiful, supple and provides a comfortable fit. Some leathers withstand moisture well, while others are softer.

The characteristics of leather are partly a result of where the animal lived. We select our leather with great care and work closely with the tanneries. Since we have been working with leather since 1936, we have a good network of quality-conscious suppliers. As you'll notice when you pull on a pair of our gloves.

Many of our gloves are made of leather without dyes. For our coloured gloves, we only use drum dyed leather. This requires a better quality raw material than when dyeing the surface, but means that the leather retains its natural appearance and characteristics. Depending on the intended purpose of the gloves, we choose nappa, suede or split. Elk split leather is porous and insulating and we use it to make our Loke outdoor gloves that are perfect to wear around the campfire. Nappa is more moisture-resistant and is therefore used for most of our ski gloves.

GLOVE CARE:

1. Dry your gloves at room temperature. High temperatures may dry out and damage the leather.
2. Grease the leather regularly and it will resist moisture, wear and tear better.
3. Leather gloves should not be washed too frequently, as this removes the natural protective properties of the leather.
4. If your gloves have a ventilating moisture barrier, such as Gore-Tex, you should not use waterproofing agents that contain silicone.
5. If dyed leather becomes wet, the dye may bleed onto your ski jacket.

WARNING!
WATCH OUT FOR METAL EDGES AND OTHER SHARP OBJECTS WHEN YOU'RE HANDLING EQUIPMENT.

ARMY LEATHER

Army Leather is our most durable leather, originally used to make gloves for military purposes. A specially treated goat leather that withstands tough, outdoor conditions. The leather is thoroughly waterproofed and its structural properties provide effective protection against moisture.

WEAR-RESISTANT | WATERPROOFED | GOATSKIN

VEGETABLE TANNED GOAT LEATHER

This leather has been tanned using natural substances such as powdered bark in the tanning process. It gives a characteristic brown color.

DURABLE | TOLERATES MOISTURE | GOATSKIN

COWHIDE

Cowhide is a durable leather with good impregnation properties. It takes on beautiful nuances in colour when dyed and resists moisture and abrasion well. It is therefore widely used for many of our ski gloves.

WEAR-RESISTANT | WATERPROOFED | COWHIDE

ELK LEATHER

Elk leather is a soft, rich leather with good insulating properties and a fine textured surface. Although it's a durable leather, it has a slightly sensitive surface and is therefore only used in our Sport Classic collection. We use elk calfskin from Sweden and Finland, where the climate produces the best quality hides.

INSULATING | SOFT | BEAUTIFUL TEXTURE

DEERSKIN

North American white tail deerskin produces a wonderfully soft and warm leather. It is porous, just like elkskin, and the air that becomes bound up inside the leather means it insulates well too. We use deerskin for the gloves in our Sport Classic collection.

INSULATING | SOFT | BEAUTIFUL TEXTURE

ECOCUIR®

Ecocuir® is a trademark-protected cowhide that is tanned without the use of chrome or synthetic dyes. The leather is saturated with grease to repel moisture. Its beautiful natural colour develops a lovely patina over time.

CHROME-FREE | COWHIDE | NATURAL COLOUR

HESTRA GLOVE SYSTEM

WARMS THE HANDS LAYER BY LAYER

You can keep your hands dry and warm by combining gloves with different features. This is how you can layer and vary your gloves to adjust to changing temperatures and your activity levels.

INNER GLOVE LAYER 1

The liner is the hand's underwear, which transports moisture away from the skin and creates an additional warming layer. You should keep it on to avoid contact with cold surfaces when performing tasks that require finger dexterity.

BASE GLOVE LAYER 2

The base glove is the one you use most frequently. It keeps your hands warm in normal cold conditions, wicks away the moisture and provides protection from the wind. The base glove is available with a fixed or removable liner. A removable liner makes it easier to regulate the heat.

SHELL GLOVE LAYER 3

Shell Gloves are a layer of added protection that you pull on when it's biting cold, wet or if you're standing still for prolonged periods. Shell Gloves should be generous enough to leave room for a large volume of insulating air.

HEART BEFORE HANDS

Hands and feet are the first body parts to suffer when you are out in the cold. They are furthest from the vitals in the core of your body - your heart, brain, spinal cord and gastrointestinal tract. The fine mesh of capillaries in the fingers and toes is shut off when it gets too cold and the tips of your fingers turn white. You could say that the body "sacrifices" less important parts in an attempt to save the organs that are essential for survival. The point of this is that your hands and feet need extra protection when it's cold to compensate for the body's natural function.

Remember that even if your body is warm in general, your hands can still get frostbite.

ALPINE PRO

Styles developed for freeriders, professional mountain guides, ski instructors and others who place high demands on function, fit and durability.

ALPINE RACING

Gloves developed specifically for alpine racers. Supple and close fitting gloves equipped with impact protection.

ALPINE

A wide range of gloves and mittens developed with the recreational skier in mind. Supple and warm styles as well as styles with a women's specific fit.

JUNIOR

Kid's gloves and mittens for all ages, from infants to young teenagers. Wide range of styles for various use and temperatures.

OUTDOOR

All you need in gloves for your outdoor adventures such as ski touring, hiking, kayaking and running.

MOUNTAINEERING

Highly functional styles for all year use in the mountains. Designed with particular attention to climbers' requirements for durability, grip, warmth and protection.

CROSS COUNTRY

Gloves designed for both track skiing and ski touring, for elite athletes as well as recreational skiers.

LINERS

Wide selection of liners for increased warmth and flexibility in varying temperatures and weather conditions.

SPORT CLASSIC

Our collection of exclusive leather gloves in classic designs for everyday use.

ACCESSORIES

Our Hestra glove accessories are made to ensure that you can enjoy your gloves longer and improve the functionality, durability and feel even longer.

JUNIOR

When we design gloves within junior - for children and teenagers - we set the same high standards that we do with the adult models. Even small hands need gloves that can withstand cold temperatures, snow and rain - sometimes to an even higher degree. Materials, functions and features like handcuffs and reflectors - we produce everything with the same care.

MOUNTAINEERING

Our mountaineering collection consists of highly functional gloves that live up to climbers' tough demands for unrestricted feeling and durability, year round. Several of the warmer models have detachable liners that can be washed and replaced. This means that these gloves can be adapted to varying weather conditions and uses.

LOCATION: HESTRA, SWEDEN
PHOTO: KENT MALM

A misty forest landscape with a small tower on a distant hill. The scene is dominated by tall, dark evergreen trees in the foreground and middle ground, with a soft, hazy background of more forest and a small, white, tower-like structure on a hill in the distance. The lighting is soft and diffused, creating a serene and atmospheric mood.

SPORT CLASSIC

The classic design, the comfortable fit and the fine leather are all characteristics of Sport Classic, our collection of leather gloves. The combination of a timeless look and dependable craftsmanship make them suitable for many places and occasions.

Three steps to success

A clear and well-managed glove wall makes it easier for customers to find the right model and will increase sales.

- Arrange gloves vertically by price range.
Premium gloves should hang highest and at eye level.
- Sort gloves horizontally based on categories.
- Hang the gloves with space between each model.

Hand and glove size

Hestra glove size inches

6 7 8 9 10 11

Hand circumference (mm)

152 178 203 229 254 279

Hand length (mm)

160 171 182 192 204 215

Glove sizes are based on average human hand dimensions. This data is collected through extensive research.

The sizes are only a recommendation.

Measure your hand

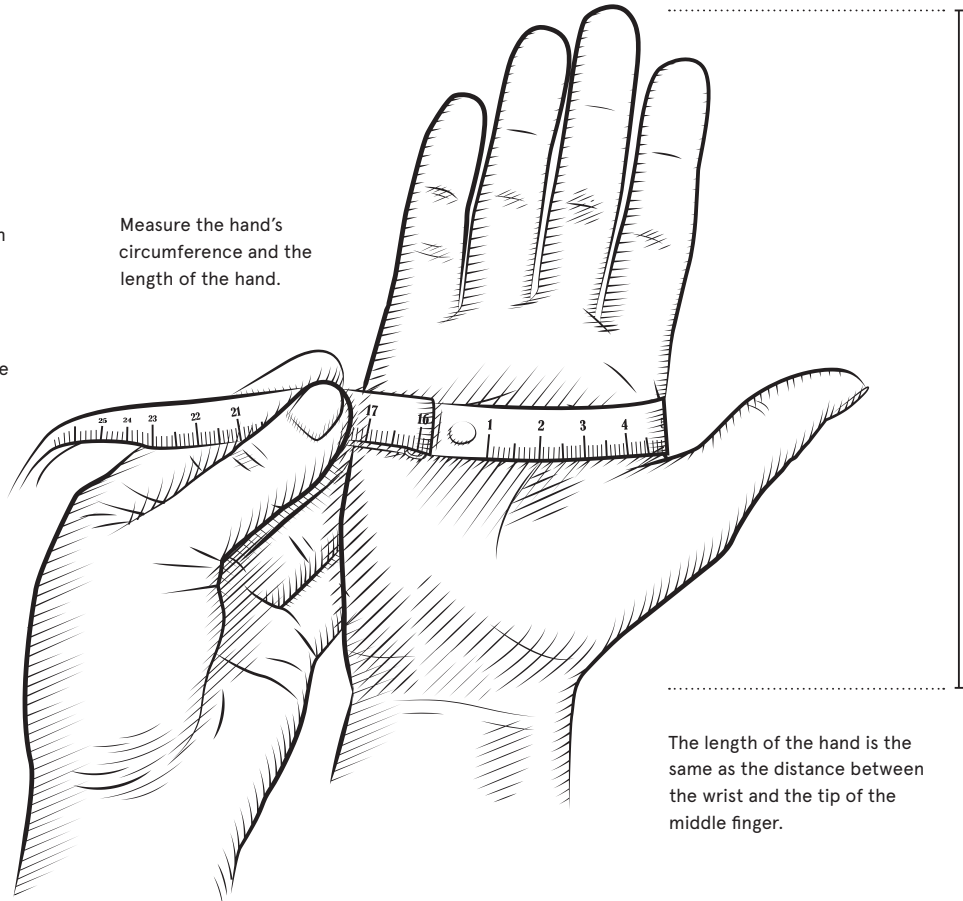

Two things to consider regarding size and measurement of the hand:

- Circumference of the hand
- Length of the hand

The hand's circumference is measured with a tape measure 20 mm above the thumb (see illustration).

The length of the hand is the distance between the wrist and the tip of the middle finger.

Measure the hand's circumference and the length of the hand.

The length of the hand is the same as the distance between the wrist and the tip of the middle finger.

One pair of gloves in numbers

109 parts, 46 manufacturing steps, 18 quality check-points. Production time of 1 hour and 27 minutes.

GLOSSARY

TEXTILES

Cordura® Stretch Extra durable nylon fabric with good stretch properties that provide a good fit. A breathable fabric that is wind and waterproof.

Dobby Melange Durable, wind/ waterproof/ breathable woven fabric. The composition 97% Polyester/ 3% Spandex provides good stretch properties.

HESTRA Softshell 4-way stretch Durable and supple stretch fabric made of polyamide/span-dex. Wind and water resistant with good ventilation properties.

GORE WINDSTOPPER® Softshell windproof and water resistant stretch fabric with excellent breathability characteristics.

Micron Wind and waterproof, soft polyester fabric with good breathability characteristics.

Neoprene® Textile coated synthetic rubber that is weather-resistant and insulates well, even when wet.

Proton Durable nylon fabric that is windproof, waterproof and has good breathability characteristics.

Canvas Sturdy, close-weave, thin-shaft fabric made from twined polyester/cotton yarn.

Triton A durable nylon fabric that is wind and waterproof and has excellent breathability properties.

Ventile Tightly woven fabric made of 100% cotton. This dense textile is wind and water resistant without impregnation, a membrane or flourcarbons.

Waxed Canvas Sturdy, close-weave, thin-shaft fabric made from twined 60 % cotton and 40 % polyester wax finish.

LEATHER

Army Leather Army Leather is our most durable leather, originally used to make gloves for military purposes. A specially treated goatskin that withstands tough, outdoor conditions. The leather is thoroughly waterproofed and its structural properties provide effective protection against moisture.

Cowhide Cowhide is a durable leather with good impregnation properties. It takes on beautiful nuances in colour when dyed and resists moisture and abrasion well. It is therefore widely used for many of our ski gloves.

Ecocuir® is a trademark-protected cowhide that is tanned without the use of chrome or synthetic dyes. The leather is saturated with grease to repel moisture. Its beautiful natural colour develops a lovely patina over time as the gloves are used.

Elkskin Elkskin is a soft, rich leather with good insulating properties and a fine textured surface. Although it's a durable leather, it has a slightly sensitive surface and is therefore only used in our Sport Classic collection. We use elk calfskin from Sweden and Finland, where the climate produces the best quality hides.

Deerskin North American white tail deerskin produces a wonderfully soft and warm leather. It is porous, just like elkskin, and the air that becomes bound up inside the leather means it insulates well too. We use deerskin for the gloves in our Sport Classic collection.

Vegetable Tanned Goat Leather Goat leather that has been tanned using natural tannins such as bark powder. The result is environmentally friendly leather that is supple and has a unique brown color.

Wild boar leather Wild boar produces a robust leather that is both tear and abrasion resistant. It has a porous structure that insulates well. We use Swedish wild boar leather for the gloves in our Loki outdoor collection.

LINERS

Bemberg Soft and warm polyamide fabric.

Fleece Airy and napped material made of polyamide or polyester. Retains heat well, carries away moisture and dries quickly.

Felted wool/wool terry cloth/angora Wool keeps hands warm even when the material becomes wet. Felting means that the wool has been washed with soapy water to be extra warm, dense and durable.

Merino Wool The wool from merino sheep has a very fine fibre structure which gives a soft and comfortable feeling.

Polartec Power Dry/Power Stretch Thin, moisture-wicking liner with good breathability.

Silk 100% natural silk.

Wool Terry A knitted material with curly fibers and terry loops that can trap large amounts of air-up to 80%.

MEMBRANE

CZone® A glove with four different layers-outer material, waterproof and breathable membrane, insulation and lining, which complement each other and creates a warm and pleasant comfort zone for your hands.

GORE-TEX® A thin PTFE membrane that lets out excess body heat and moisture, while preventing water from getting in. The material is wind and waterproof.

OutDry® OutDry is the innovative Italian technology to waterproof footwear, gloves and other clothing items where the standard manufacturing techniques based on seam-sealed waterproof fabrics cannot be utilized. The external layer and the membrane are a unique body: no more space in between.

CZone Contact Gloves with waterproof and breathable function where the shell, membrane and lining is bonded together to create improved fit and dexterity.

DESIGNS

Eagle Grip® A design where we shape or pre-curve the gloves so that they follow the natural curve of your hands, giving a closer, more comfortable grip.

Leather welt An extra piece of leather that protects and strengthens the seam around the glove's thumb.

External seams Sewing technology that we use for several models. It provides excellent comfort for the fingers.

Piqué seam Stitching performed when the material is wrapped around, providing an extra supple fit.

Snow lock Keeps snow on the outside and warmth on the inside.

Vertical Cut® A special design used in some of our Alpine Racing gloves for the best possible fit.

Wolf Paw® A patented fingertip reinforcement design that eliminates seams from surfaces that are exposed to the most wear and tear.

Ergo Grip® It is a patented design that makes it possible to sew gloves with different levels of pre-curved fingers for optimal grip. Ergo Grip makes a very close fit on the palm, with minimal excess material.

INSULATION

Fiberfill An insulating material made from polyester fiber.

G-Loft is a very thin polyester fiber with exceptionally high insulating capacity, even in wet conditions. G-loft is quick drying, ventilated, very compressive and easy to wash.

Primaloft® Soft, down-like polyester that is warm, breathable and water resistant.

Thermolite® Polyester-based thin and supple insulation. Retains its insulating properties even when wet.

Swisswool® Swisswool is made from 88% wool from Swiss sheep. The other 12% is corn starch.

OTHER

Chamude A durable micro fiber material.

PU Digital/PU Power Grip Soft but durable textured material made of polyurethane.

Nor Grip A pattern coating printed on the palm for a better grip.

3M Scotchlite A reflective material from 3M.

Coating A coating on the fabric that gives the material various properties depending on which coating you use.
