TOUGH BY NATURE

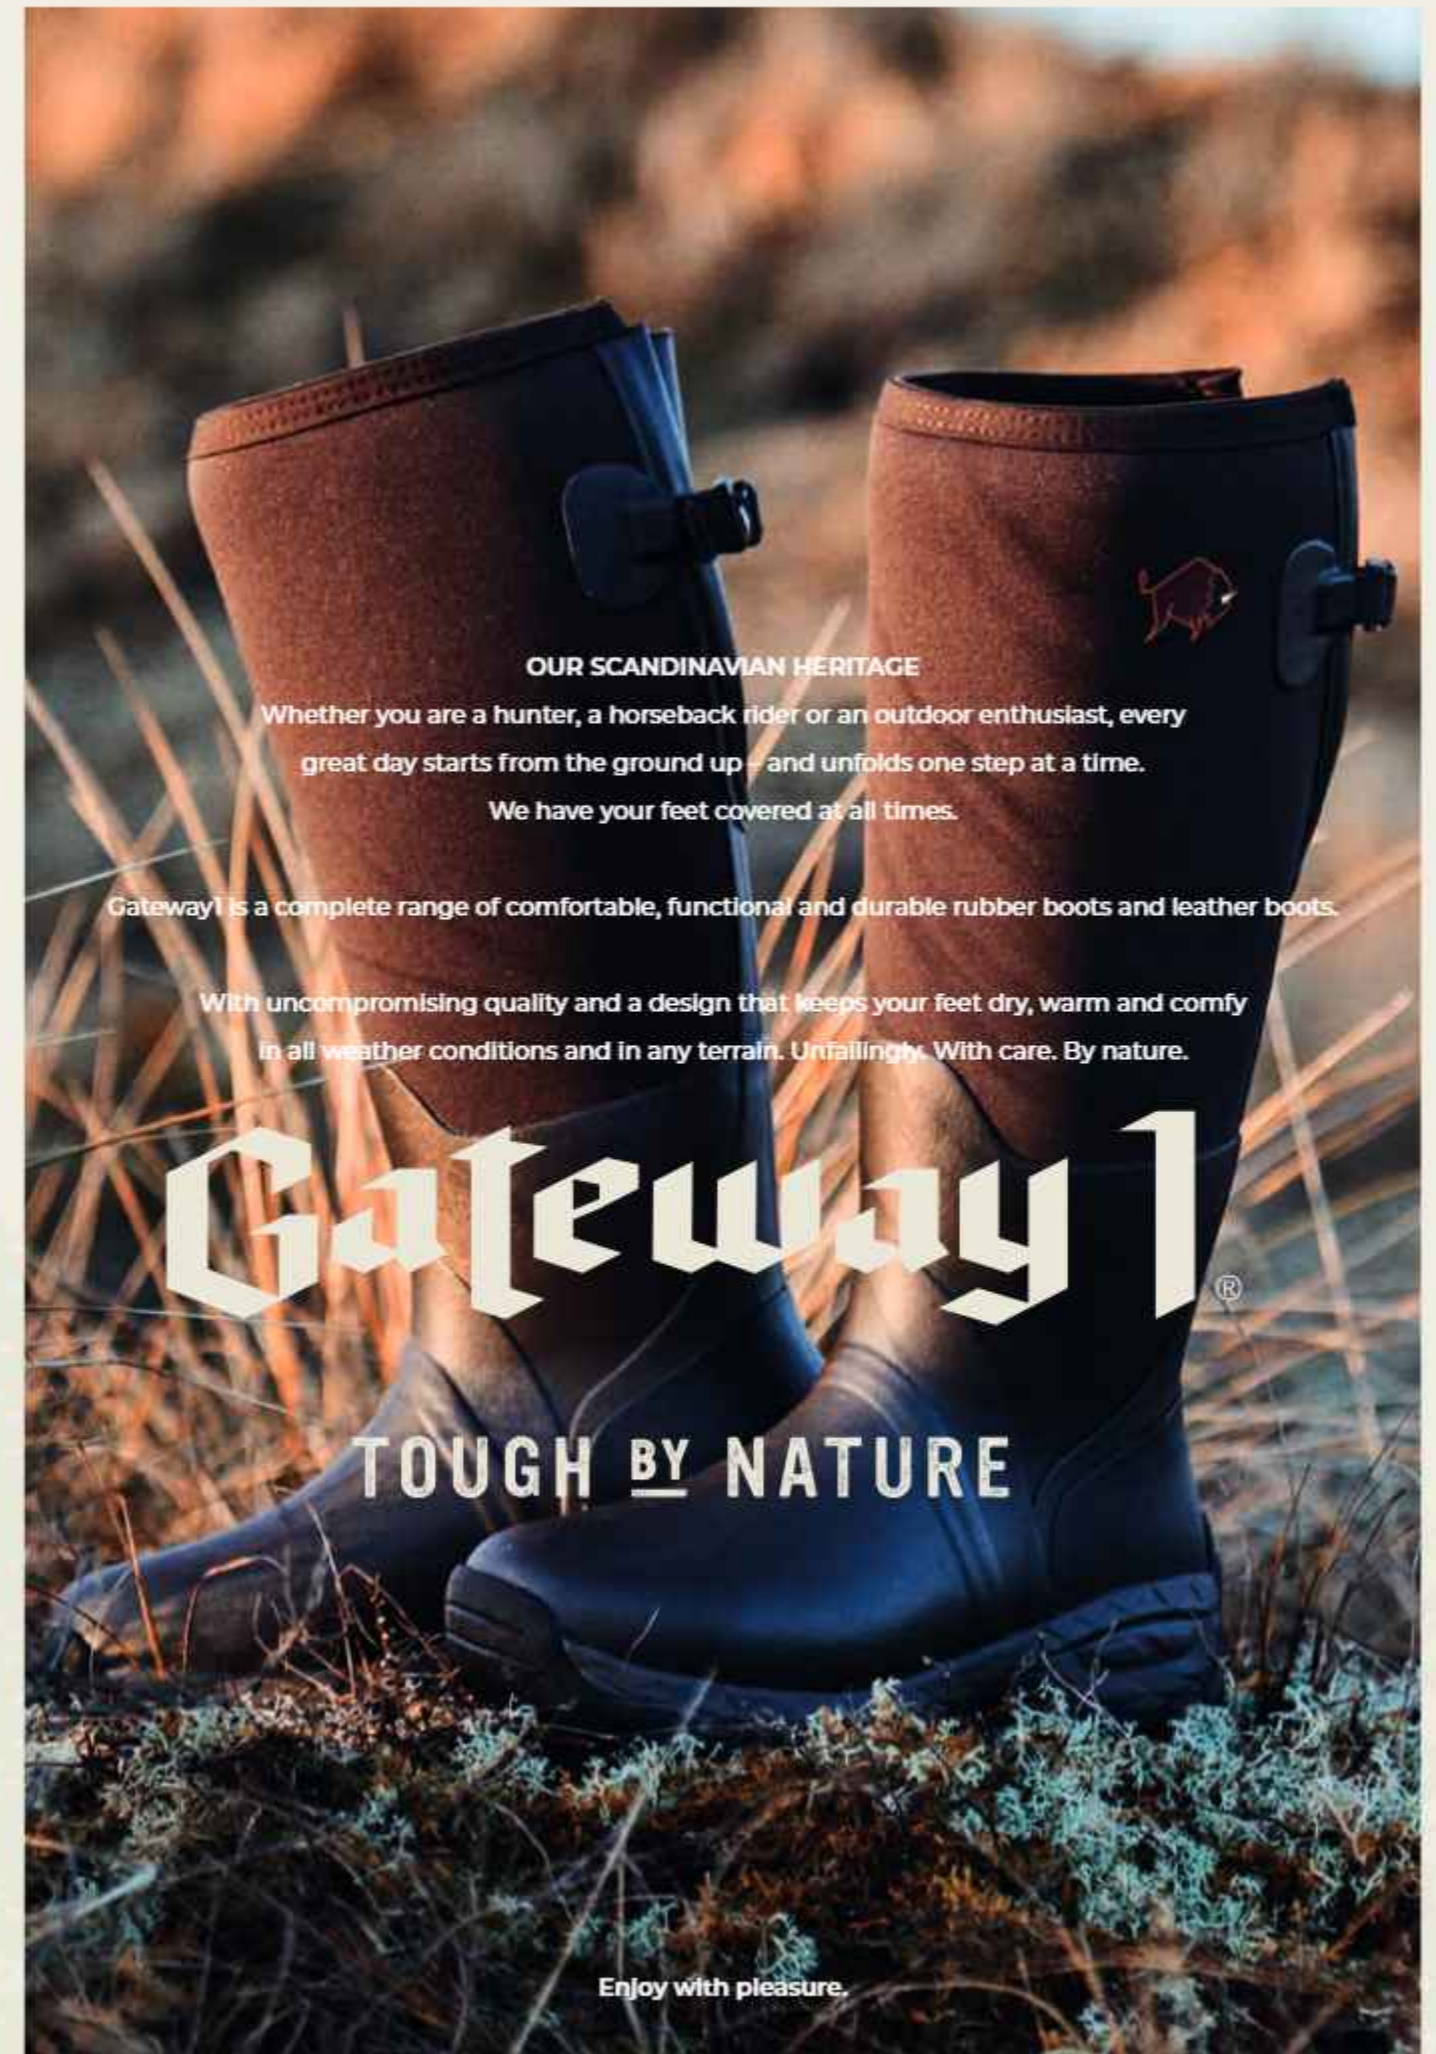

2025 / 2026

TOUGH BY NATURE. SCANDINAVIAN BY DESIGN

Over the centuries, we Scandinavians have learned to master the capricious northern weather. We've learned to adapt to the changing seasons. To keep going, even on wet, slippery, muddy, rocky or difficult ground. Nothing will keep us indoors, or hold us back. In the words of a wise old Scandinavian: "There is no such thing as bad weather, only inappropriate clothing."

This very philosophy and heritage are the core, the soul, of Gateway1. A symbiosis of knowledge, experience and passion that drives us forward every single day. Motivates us to aim high. Inspires us to create uncompromising footwear that keeps feet dry, warm and comfy in all weather conditions – and in any terrain.

For hunters, horseback riders and outdoor enthusiasts with a taste for open skies and the wonders of nature, every great day starts from the ground up – and unfolds one step at a time. We have your feet covered. Unfailingly. With care. By nature.

OUR SCANDINAVIAN HERITAGE

Whether you are a hunter, a horseback rider or an outdoor enthusiast, every great day starts from the ground up – and unfolds one step at a time.

We have your feet covered at all times.

Gateway1 is a complete range of comfortable, functional and durable rubber boots and leather boots.

With uncompromising quality and a design that keeps your feet dry, warm and comfy in all weather conditions and in any terrain. Unfailingly. With care. By nature.

Gateway1[®]

TOUGH BY NATURE

Enjoy with pleasure.

FIORDLAND TECHNOLOGY

First layer of shock absorbing and insulating molded EVA midsole

Second layer of shock absorbing and insulating molded EVA midsole

G1® turbo-energy™ heel and forefoot cushioning

External TPU shank with 360 degree support zones for added stability when walking in demanding terrain

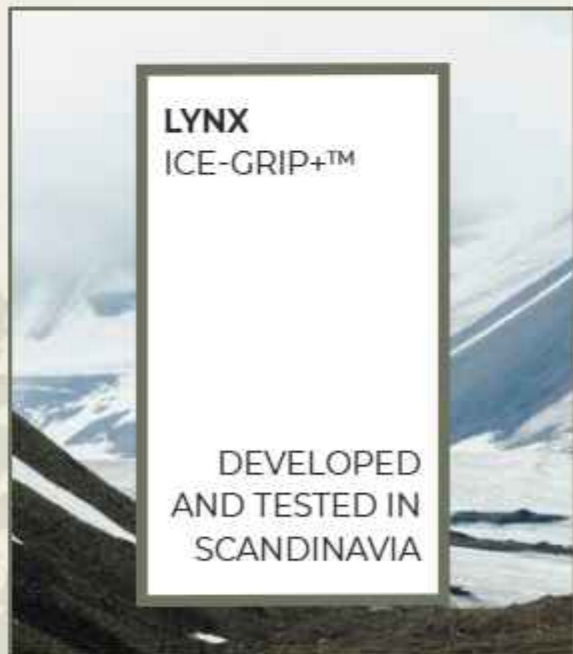

4x4 Arrow deep-grip™ rubber outsole with extra deep outsole tread

4x4 Arrow deep-grip™ outsole assembly.

Internal TPU shank support
Forefoot flex channels for added walking comfort
Heel kicker for easy off the boot

LYNX ICE-GRIP+™

DEVELOPED AND TESTED IN SCANDINAVIA

Lynx ICE-GRIP+™ is inspired by the Scandinavian lynx and the immaculate grip of its paws. The outsole rubber compound has been developed and tested in the harshest of winter environments in Scandinavia and other parts of Northern Europe.

Lynx ICE-GRIP+™ is featured in footwear for general outdoor use such as hiking, hunting or fishing as well as for industrial and work requirements.

FIORDLAND

FIORDLAND II 11"

LEATHER BOOT CONSTRUCTION

Footwear with the 100% waterproof and breathable sympatex® membrane needs a very advanced construction to fulfill the needs of heavy use in the outdoors. Care and clean your footwear for optimal function and prolonged lifespan. Hiking and hunting sets these high demands as we explain in detail.

HEEL NOTCH

This flex point makes a unique fit when you need both stability from the upper and flexibility when you sit or walk in difficult positions.

HEEL CAP

Extra external heel cap unit. Adds stability and support to the foot.

LACE LOCK

This lock makes it easy to adjust the lacing to whatever fit required. Lace eyes for added fit and comfort is a standard of Gateway® footwear.

STITCHED RUBBER RAND

By stitching the protective rubber rand to the upper you get a very durable construction.

SYMPATEX MEMBRANE "GUARANTEED GREEN"

TOP PERFORMANCE

- 100% waterproof
- Membrane water column > 45,000 mm
- Optimally breathable
- 100% windproof
- Highly elastic, hardwearing, poreless membrane
- Dynamic climate control

MAXIMUM ECOLOGY

- 100% recyclable membrane
- Perfectly safe polyether/ester
- 100% recyclable, PFAS-free laminates
- PFAS-free
- Bluesign® approved
- Oeko-Tex® Standard 100 certified
- Fluorocarbon-free treatments

PFAS-FREE MEMBRANE

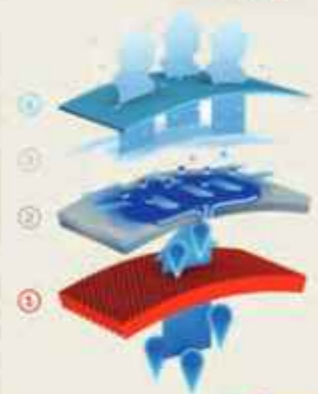

The Sympatex membrane is "guaranteed green", which means 100% recyclable like a PET bottle. It is made of polyether/ester, a compound of polyester and polyether molecules that represents no health hazard. It is PFAS-free, and therefore absolutely environmentally friendly and skin-friendly.

Unlike other membranes, the Sympatex membrane is completely free of PFAS (Polytetrafluoroethylene). The production, the landfilling and the combustion can create compounds that are ecologically harmful. PFAS has been criticised increasingly in recent years, because the fluorine compounds that are used for producing PFAS are suspected to be harmful. Per- and polyfluorinated compounds can also be released into the environment during the burning or depositing of PFAS. There, they can accumulate due to their long-life cycle.

UPPER MATERIAL

- Textile
- Protection layer

Evaporation and wicking to the exterior

Wide distribution of moisture and therefore large-scale activation of the membrane

Absorption of moisture from the foot through the inner lining into the hydrophilic intermediate layer

- ④ Protective layer
- ③ Hydrophilic membrane
- ② Innovative intermediate layer
- ① Lining

FIT OF YOUR BOOT

Depending on style, you will find two different lasts which both offer you a very supportive and comfortable fit.

We offer a women's last which has been specifically developed for the women's feet which are generally narrower in heel and forefoot compared to men's feet.

Also, women's feet are generally shorter but with a higher in-step being part of the fit. In addition to the fit you will also be able to find different types of forefoot flexibility. The stiffer a forefoot the more stable the boot becomes.

Activities in both field and forest require less stability compared to hilly and mountain environments.

G1® memory fit™
adjust the fit of your foot joint and the heel so it sits correctly in the boot and provides optimal comfort and protection.

LAST

G1® wide fit™
A bit roomy in the toe-box and for high in-step foot.

G1® athletic fit™
A tighter fit like a running shoe.

G1® women's fit™
Real women's last with optimal fit and stability.

STABILITY

G1® Stiff max™
Offers maximum support to the whole length of the foot. Mountain activity recommended in addition to whenever you want a very stable walking platform.

G1® Stiff medlum™
Offers some forefoot flexibility and full support. All round recommended.

G1® Forefoot max flex™
Offers forefoot flexibility and stabilizes the heel area. Field and forest recommended.

BOOT LAST IS THE PLATFORM THE BOOT IS BUILD ON

The last decides how the boot will fit you both in the foot and leg all the way up to the top of the boot.

G1@ wide & roomy fit™

All over a more roomy fit. For added support and cushion replace the footbed to the G1@-Alpha footbed. If you need less room add the G1@ turbo-energy™ spacer.

G1@ athletic fit™ & roomy calf™

Tight fit secures the foot and creates a walking comfort like a running shoe.
-adjust to a more roomy fit using the G1@-stage2™ footbed.
Added calf fit size for big calf's and thick pants.

G1@ athletic fit™

Tight fit secures the foot and creates a walking comfort like a running shoe.
-adjust to a more roomy fit using the G1@-stage2™ footbed.

G1@ women's fit™

Real women's last with optimal fit and stability.

G1@ kid's

Kid's feet need support. As the foot bones are soft you also need a quite roomy fit so the foot can develop to a healthy function and structure.

Thickness of the footbed can adjust the fit size of the boot.
Check out our footbeds to find the right fit for you.

WOMEN'S LAST

The women's foot is in general anatomically different from a man's foot. Women's have typically a more narrow heel and forefoot. The in-step and arch has a more steep angle.

This means the fit of the boot needs to be different in order to obtain the best fit and comfort which Gateway1@ footwear are so famous for.

So we use different lasts and not only "scale" a last.

We have extended the fit to include the same for the calf fit.

Enjoy the fit & comfort.

Can be used with all types of lug soles and tread designs

Exceptional comfort as forefoot flexibility stays the same

Wide temperature range from mild conditions to extreme winter conditions

2-way grip

No compromise on wear and tear

Optimal traction and grip in cold environments

**LYNX
ICE-GRIP+™**

DEVELOPED
AND TESTED IN
SCANDINAVIA

RUBBER CONDITIONER

HOW TO USE:

Clean your rubber boots with fresh water and dry them with a cotton cloth. Spray the Rubber conditioner on all rubber parts and leave it for 2-5 minutes. Wipe off excess Rubber conditioner with a cotton cloth and the boots are ready to be stored in a dry and dark environment preferable less than 20C.

- Never leave your boots in direct light, or sun.
- Never dry your rubber boots on the heater.
- Never store your rubber boots in a closed bag.

GOOD ADVICES HOW TO USE FOOTWEAR:

- Do not wear barefoot.
- Do not use cotton socks as these keeps moisture and wear the lining.
- Take out the footbed to air your boot.

Rubber conditioner, 150ml

Rubber conditioner

Style# 990100001

1001 Clear

Volume: 150ml

ADVANTAGES:

Will care for your rubber footwear to maintain function, extending durability and lifespan. Rubber conditioner treats the rubber to prevent cracks and drying out.

Built-in UV absorber that absorbs/neutralizes the UV radiation before it "attacks" the rubber. Gateway1® Rubber conditioner does nourish the natural rubber in depth so it remains as good as new and also gets the dirt out of it.

Microscopic dirt particles penetrate rubber and by treating you clean the rubber in depth so the dirt can be removed.

When rinsing after cleaning with water, the dirt is rinsed off.

The UV absorber is built-in to protect the boots against colour fading and hydration.

Both attack the rubber and your boots so they do not feel comfortable anymore.

Nikola Ludwig

GATEWAY1® SOCKS PROVIDE YOU WITH GREAT COMFORT

Gateway1® socks feature merino wool to give you the best insulation and climate for your feet. All socks are developed for the outdoors and will provide you with great comfort.

Flat toe seam for added comfort.

Lining: Fabric

980102001 G1®-Alpha™ footbed
Memory foam, orthotic shape with heel insert for stability. Shock absorbing G1® Diamond gel pads.

G1®-stage1™
Low profiled footbed in molded EVA plus cushion pads in heel and forefoot.
-not available as replacement.

980102002 G1® stage3 footbed
Orthotic shape to lock the foot. Shock absorbing P.U. with vent holes.

G1® stage 2 footbed
Blown PU for extra breathability. Supportive and shock absorbing properties.

980103001 G1® turbo-energy™ spacer
Place below footbed and you obtain a tighter fit. This will also adjust your boot size with ¼ - ½ size. Besides it is a great insulator for colder days.

flexibility stays
the same

Wide
temperature
range from mild
conditions to
extreme winter
conditions

Optimal traction
and grip in cold
environments

Lynx ICE-GRIP+™ is inspired by the Scandinavian lynx and the immaculate grip of its paws. The outsole rubber compound has been developed and tested in the harshest of winter environments in Scandinavia and other parts of Northern Europe.

Lynx ICE-GRIP+™ is featured in footwear for general outdoor use such as hiking, hunting or fishing as well as for industrial and work requirements.

Function

Unlike most rubber compounds, Lynx ICE-GRIP+™ offers 2-way grip. Rather than loose grip at -25°C, Lynx ICE-GRIP+™ can withstand temperatures down to -45°C without losing grip.

The compound has been tested in the field and the lab.

Inspired by traditional table tennis bats with two different rubber compounds, the outsole rubber compound of Lynx ICE-GRIP+™ is developed in such a way that it uses the grip function when needed, while the durable reinforcement part of the compound is used in areas of critical wear.

The rubber compound is based on a formula of natural rubber mixed with synthetic rubber as known from winter tires for vehicles.

However, people need a special type of grip in order to break in the heel and forefoot of the footwear.

Thus, the compound is placed strategically, optimising the footwear's grip and reinforcement.

Typically, you use a softer and less wear-resistant compound to obtain better grip in cold environments, but by combining grip and reinforcement,

Lynx ICE-GRIP+™ offers an optimal solution. Outsole treads vary and are often based on the type of activity that the footwear is developed for.

RUBBER BOOT CONSTRUCTION

Natural rubber is a mix of pure natural rubber mixed with additives to be used in a rubber boot. The rubber compound is rolled and prepared into rubber pieces which is die-cut and hand layered over the boot last. Later the whole boot is vulcanised for 100% waterproofness. All boots are tested in the bulk production output. The boots are fully handmade by proud traditional hand craftsman.

G1 75 G1 75 The best rubber compound with optimal flexibility. By adding lamination of different rubber layers you obtain the strongest rubber called Japan-rubber™ technology.

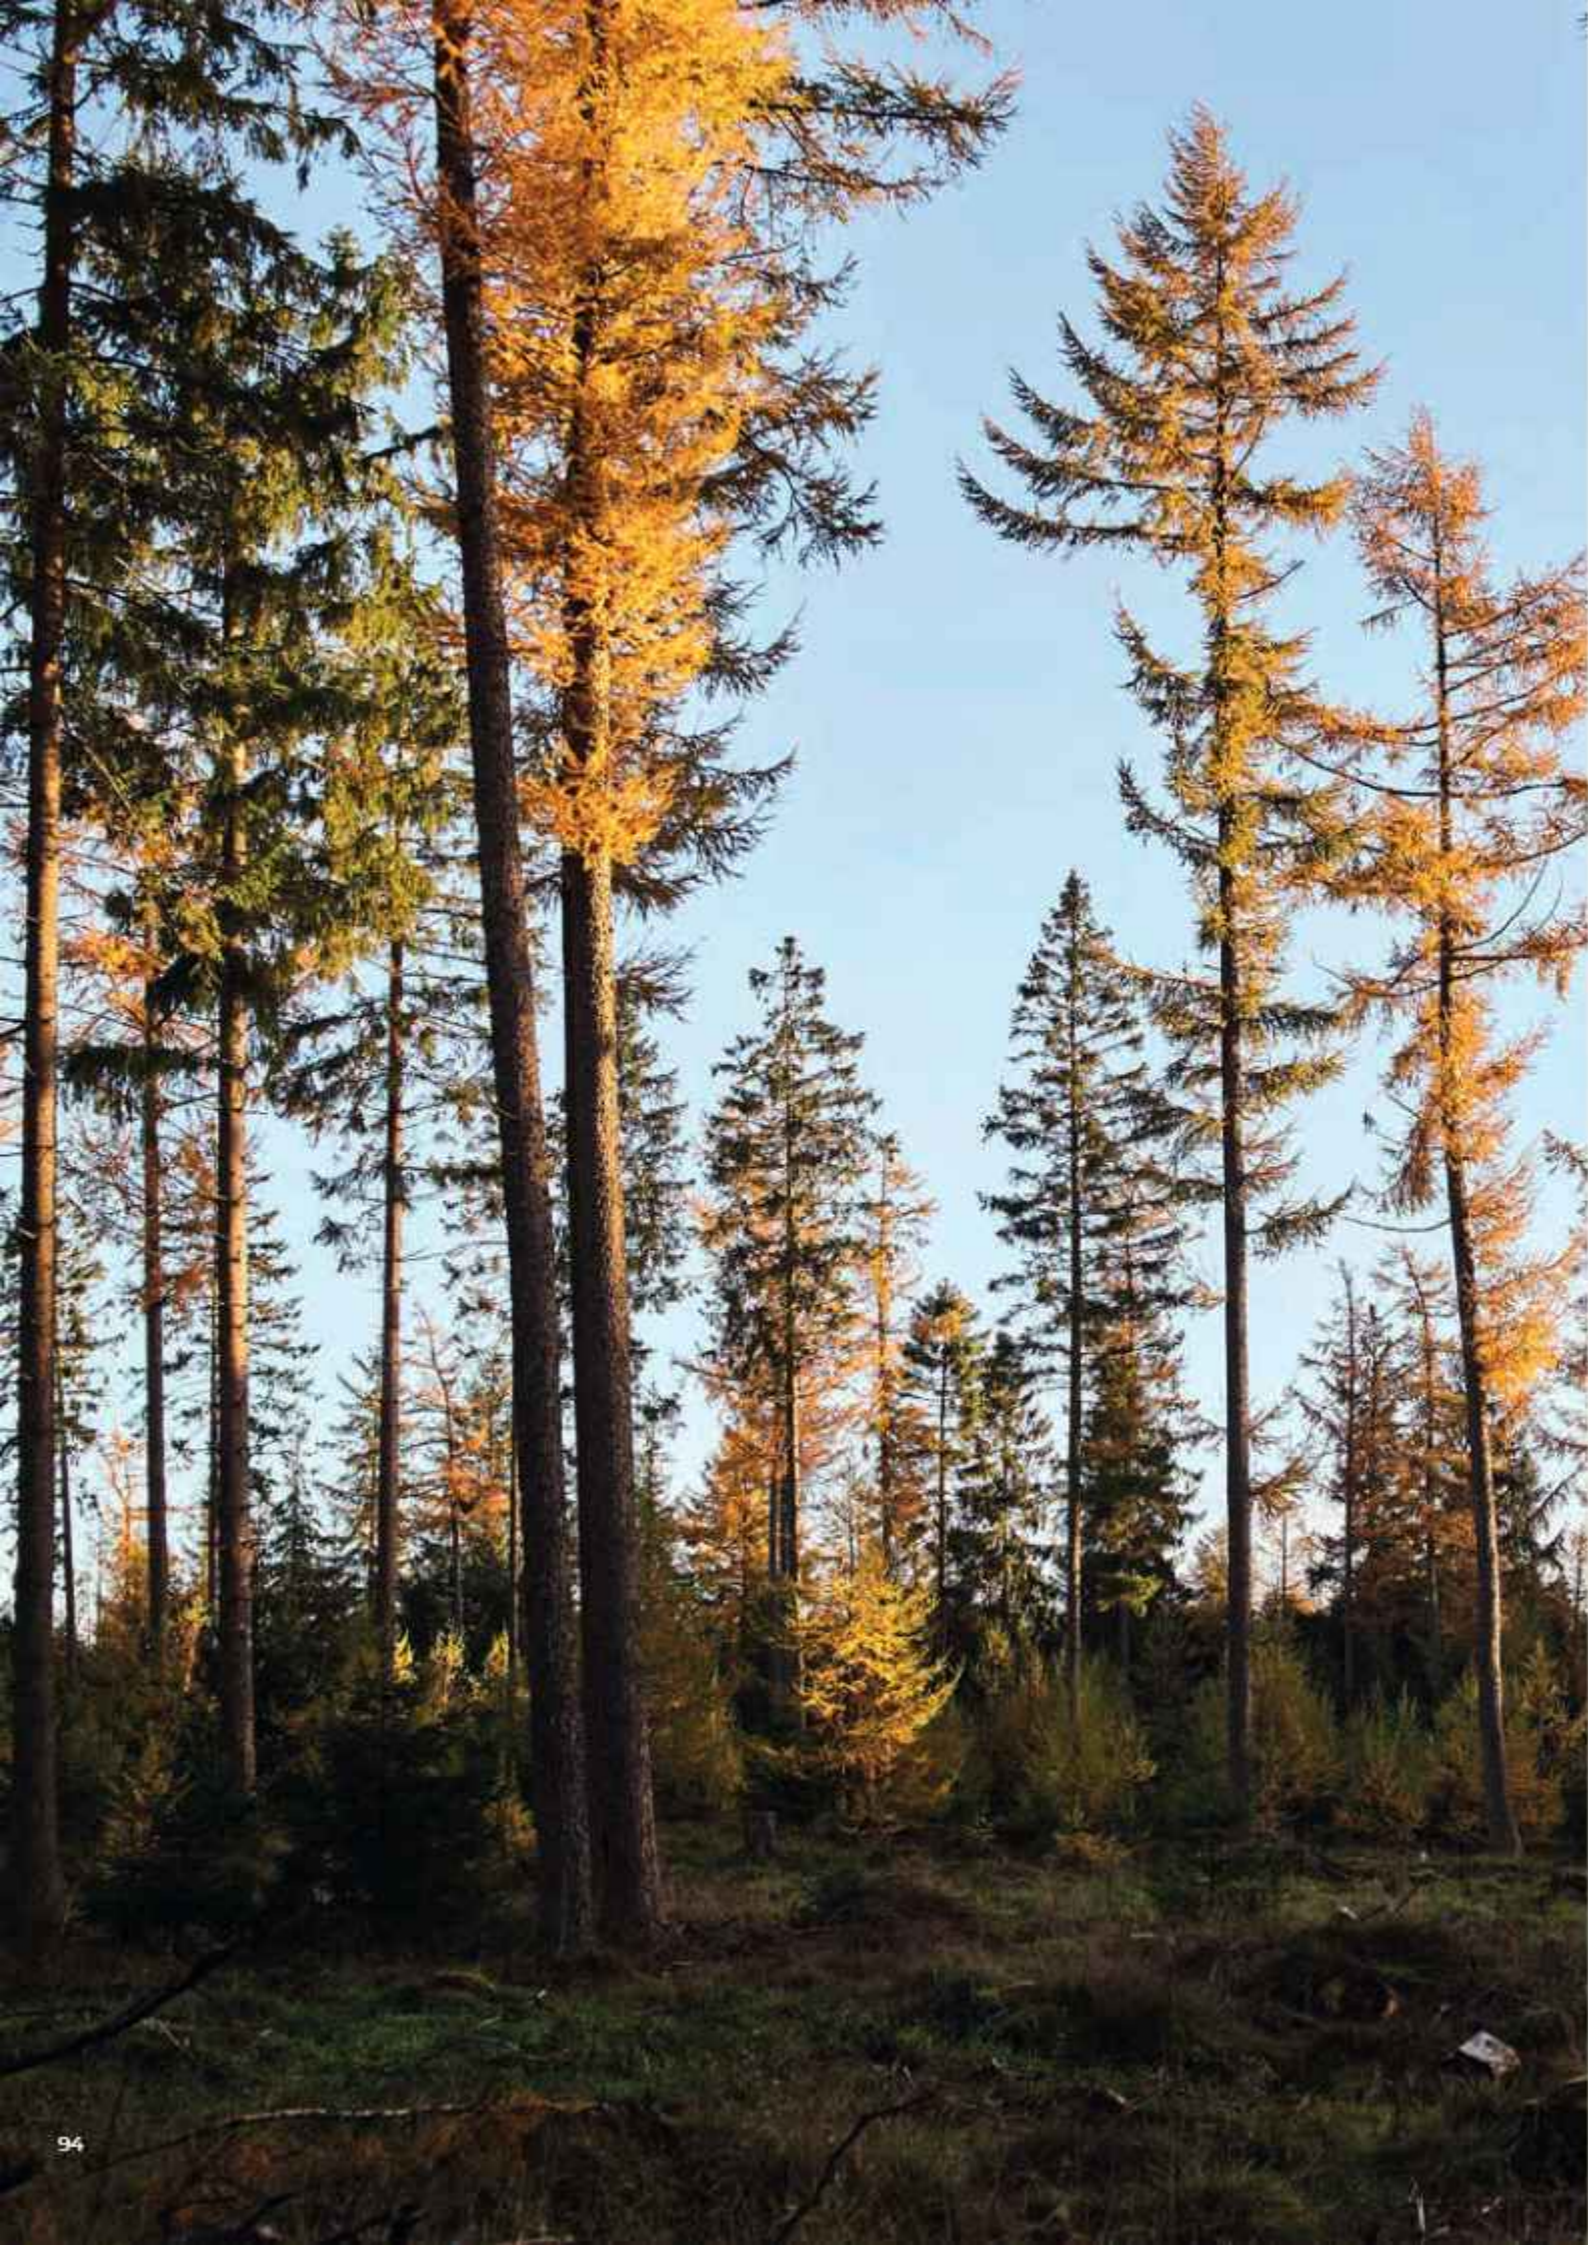

G1 70 G1 70 High technology rubber compound combined with the classic "sticky" rubber feeling which is a certificate of a durability and high quality. Several styles with this rubber compound also features the Japan-rubber™ technology.

Side-zip medial or lateral design for optimal pulling on and off of the boot

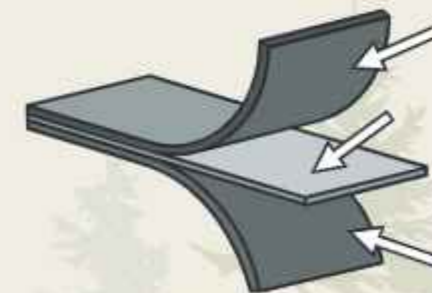

Heel kicker design makes for easy removal of the boot

JAPAN-RUBBER™ TECHNOLOGY

All styles in the Pheasant Game, Pro Shooter, Woodbeater, Icebeater and Moor Country series features the Japan-rubber™ technology.

Japan-rubber™
Multi-layer natural rubber
laminated together with a rubber net
- which obtains extra reinforcement
and protection.
Up to 2.5 times stronger in flex-test.

*This is an extract from the Japanese
patent application description*

RUBBER BOOT DETAILS

Gusset strap & buckle

Adjustable upper with a flexible gusset to optimize fit of any calf size.

"Key hole"

to cover the zip strap.

G1®-flex calf™

with high abrasion resistant Spandex cover.

YKK side-zip

in medial design – easy access, on and off.

Spandex cover

The elasticity and strength (stretching up to five times its length) of Spandex fabric reinforces the upper to prevent damage when walking through scrub and other dense undergrowth.

YKK side-zip

in lateral design – easy access, on and off.

TECHNOLOGY OF AN OUTSOLE

The function of an outsole decides which type of outsole the boot should feature. Here we describe the basics of our outsoles which actually consist of several parts which when combined is an outsole system.

COIL LINING™

The Coil lining™ features a special developed pattern to transport moisture effectively away from the foot and leg during activity. Used alone it creates a cooling effect, or combined with neoprene, G1®-air spacer™ and / or 3M Thinsulate™ for insulation properties.

Cup-sole

Shock-absorbing heel unit

The outsole surrounds the upper and provides stability.

Heel kicker for easy off the boot.

Cemented sole

Molded EVA

TPU shank

Shock-absorbing and insulating molded EVA midsole. Provides protection and comfort like a running shoe.

TPU shank

External and internal TPU shank system provides optimal stability on any ground surface.

Coil lining™ + 5mm neoprene
Secures optimal moisture transportation

OUTSOLE SYSTEMS

The outsole helps you to move in the best way. It can control take-off, stability, shock absorbing, grip- and braking abilities so you can focus more on the outdoor nature experience. Often you will find a 90-degree heel design on the outsole. This is required for many activities in order to support a fixed point for the foot.

4x4 Arrow deep-grip™
Top performance shock-absorbing, stability and insulation. Optimal grip with deep-tread and Lynx ICE-GRIP+™. Cemented.

4x4 Torsion-stabilizer™
Running shoe comfort with added grip zones and Lynx ICE-GRIP+™. Cemented.

All-terrain gripper 2.0™
Comfort as a running shoe with 4x4 grip and added width for stability. Cemented.

Mud-field™
Hunt in demanding terrain with LYNX ICE-GRIP+™. Cup-sole.

G1® Rainwalker
Feels like a running shoe. Low profiled outsole for wet surfaces and harder ground. Cemented.

Field-sport™
Stability, grip and durability. Cup-sole.

Country F/T™
Classic tread. Cup-sole.

Torrential-grip™
Gum rubber outsole for optimal grip. Cup-sole.

Rainmaster™
Flexible and good grip. Cup-sole.

G1® Arrow grip™
Feels like a running shoe with added grip. Stable platform provides great walking properties. Cemented.

Foreman SD™ oil resistant
90-degree heel design for added support. Oil resistant high-abrasion compound. Direct attached.

G1® calendar™
Rough outsole profile for good grip in wet and snowy ground. Vulcanised.

COMFORT RATING

Woodbeater 18° 7mm

With the comfort rating we estimate the lowest temperature where you have warm feet in low or zero activity. Depending on your body, socks and clothing this can vary but the comfort rating is a good indicator. We have tested all our footwear very aggressively and made conservative estimates, so you might experience activities in far lower temperatures with warm feet which is only an advantage to you. We always test with various conditions and people in addition to the laboratory climate chamber environment.

We insulate many styles to give you warm feet by using the unique G1@-fleece or Coil lining™ + 5mm neoprene + 2mm G1@-air spacer™. For the highest insulation we add up to 800g 3M Thinsulate™ - check out which style will fit your requirements.

GATEWAY1® FIT ENJOY THE FIT & COMFORT

Gateway1® fit

The women's foot is in general anatomically different from a man's foot. Women's have typically a more narrow heel and forefoot. The in-step and arch has a more steep angle.

This means the fit of the boot needs to be different in order to obtain the best fit and comfort which Gateway1® footwear are so famous for.

So we use different lasts and not only "scale" a last. We have extended the fit to include the same for the calf fit.

Enjoy the fit & comfort.
